### Cover note

This document is generated from a frontend-only simulator using synthetic examples. It is intended as an educational workflow artifact for personal website visitors and should not be interpreted as advice, endorsement, or a statement about any employer or organization.

# AI Workflow Readiness Brief

Static executive simulator report. No real company data was collected or processed.

| Selection       | Value                                                                                                                                                                                                                                                                                                                                          |
|-----------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Business area   | Sales                                                                                                                                                                                                                                                                                                                                          |
| Tool stack      | CRM + Email                                                                                                                                                                                                                                                                                                                                    |
| Step-level apps | Trigger: HubSpot or Salesforce<br>Intake: HubSpot Forms + Gmail<br>Data Retrieval: Salesforce + Outlook<br>Data Quality Check: Insyncle<br>AI Analysis: Salesforce Einstein or ChatGPT<br>Guardrail Review: Salesforce Flow<br>Human Approval: Salesforce Approvals<br>Final Action: Outlook or Gmail<br>Logging: Salesforce Activity Timeline |
| Workflow goal   | Detect Missing Information                                                                                                                                                                                                                                                                                                                     |
| Risk level      | Medium Risk                                                                                                                                                                                                                                                                                                                                    |
| Oversight mode  | Approval Before Final Action                                                                                                                                                                                                                                                                                                                   |

| Governance Recommendations         |
|------------------------------------|
| Named human owner                  |
| Approved source list               |
| Confidence threshold               |
| Exception routing path             |
| Audit log for every recommendation |

| Safe AI Actions                               | Restricted AI Actions                             |
|-----------------------------------------------|---------------------------------------------------|
| Summarize records into plain English          | Make irreversible business decisions              |
| Classify request type and urgency             | Send sensitive external messages without review   |
| Draft internal notes for review               | Change official records without approval          |
| Identify missing information                  | Ignore policy conflicts or low-confidence outputs |
| Prepare a checklist for the responsible owner | Use private data outside approved context         |

| Failure Simulation Summary                                                                                             |
|------------------------------------------------------------------------------------------------------------------------|
| Sensitive language detected (critical)                                                                                 |
| Pause the workflow, mark the output as review-required, and attach the source concern.                                 |
| Review the source evidence, correct the record or policy interpretation, and decide whether the workflow can continue. |

| Governance Timeline                    | Control Note           |
|----------------------------------------|------------------------|
| Trigger received with source reference | Selected source record |

| Governance Timeline                               | Control Note           |
|---------------------------------------------------|------------------------|
| Data quality and policy checks run                | AI recommendation      |
| AI prepares recommendation                        | Confidence label       |
| Exception rules decide whether review is required | Reviewer decision      |
| Final action and reviewer decision are logged     | Final action timestamp |

**Important note**

This report is generated from a static simulator using synthetic examples. It does not use real company data, does not connect to any business system, and does not provide legal, compliance, employment, or implementation advice.
